

Pass Box

It is a kind of assistant equipment of clean room, mainly used in the delivery of small articles between clean areas and between clean areas and non-clean areas to reduce the opening number of the clean room door so that the pollution of clean room will be reduced to the minimum.

Characteristics:

- 1、the box body is made of good stainless steel plate.
- 2、the working platform surface is stainless steel plate, which is smooth and clean.
- 3、the equipment is classified as three branches: general, electronic linkage and machine linkage; and there are ultra-violet sterilization and handle with lock for matching.

BZC All Stainless Steel General Type
