Description

- With our **modeling film (dynoc film)** you add color to your design model and put it perfectly in scene. Our modeling film is available in "transparent" (for painting) and in different colors, it is especially suitable for applying on clay. Whether on crooked, round or square surfaces, the thin film is easy to apply.

For easy and clean processing of our modeling films we recommend our movable "[DynocTub](#)".

If you are interested in this product from our [studio equipment](#), please send us a "request" in our online shop or contact our staff directly at sales@kolb-technology.com.
