

TEXTILE/LEATHER TESTER

Bursting and Strength Tester

Digital Bursting and Strength Tester

Accessories Bursting and Strength Tester

Manual Wrap Reel

Motor Wrap Reel

Spray Tester

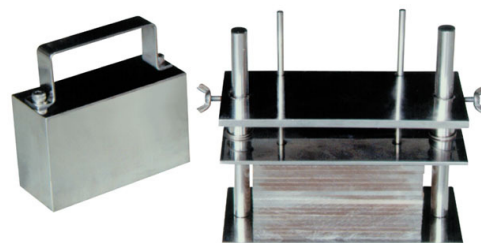

Motor Twist Tester

Yarn Inspector

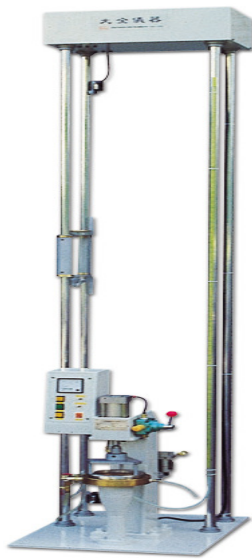

AATCC Perspiration Tester

Dyeing Rubbing Tester

Water Penetration Tester

Water Penetration Tester (Portable Type)

Stiffness Tester

Elmendorf Tearing Strength Tester

Pneumatic Specimen Press

Abrasion Tester

Aging Oven

Discoloration Chamber

Crock meter (Digital/Manual)

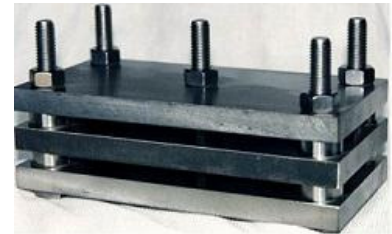

Color Viewing Booth

Textile Sample Cutter

Compression & Deformation Tester

RUBBER/PLASTIC TESTER

Material Testing Machine

Manual Forming Machine

Electrical Forming Machine

Manual Specimen Punch

Cutter for Hardness Specimen

Material Testing

Pneumatic Specimen Punch

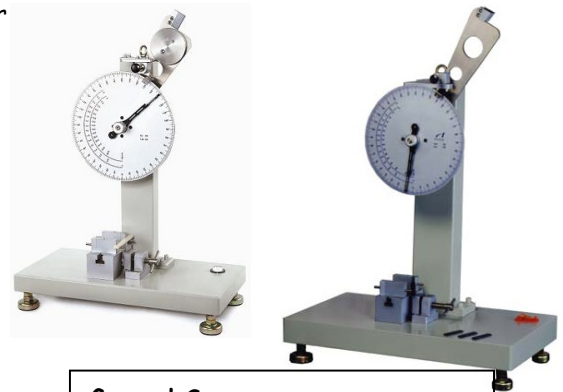

AKRON Abrasion Tester

Abrasion Tester

Universal Impact Tester

Coating/Printing Tester

Dropping Impact Tester

General Spec:

- > Equiped with IZOD & CHARPY

Digital Impact Tester

General Spec:

- > Equiped with IZOD & CHARPY
- > Included machine energy loss calculation.
- > Ability to measure how many capacity need to break the brittle material.

Mechanical Impact Tester

General Spec:

- > Equiped with IZOD & CHARPY
- > Included machine energy loss calculation.

Impact Specimen Angel
Cutting Device

General Spec:

- > To produce sample for IZOD & CHARPY
- > Ability to cut various V depth according to standard.
- > Ability to cut at different angle.

Dupont Impact Tester

Stiffness Tester

General Spec:

- > To test fine, thin material such bristle, soft sheet...etc
- > Can be set various angle and length of specimen
- > To determine the hardness of specimen by test at max bending force.

Heat Deflection Tester

Function:

- > Heat Deflection tester is used to test material deflection at certain temperature and under specific load. It is suitable to test material which is still rigid when at temperature 27°C.

Gravity Meter

Function:

- > The Gravity Meter is designed according to the Principle of Archimedes. The appearance of the testing sample is not limited, so it's more easy to use.

Holder for Hardness Gauge

TORQUE TESTER

Closure Torque Tester

Function:

> This equipment is specialized for testing the torsion force of bottle top.

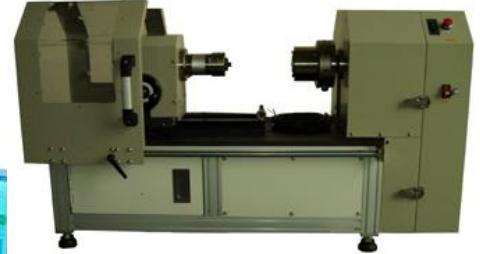

Vertical Torque Tester

Function:

> This tester is vertical type, is used for testing torque force under 50N-M, like bottle cap, electrical component, able process breaking torque, torsion fatigue and angle of torsion fatigue test, and increase positive press on specimen.

Horizontal Torque Tester

Function:

> Torque Tester measures the torque of electric, manual and pneumatic tool, also including torque of screws and nuts. It is suitable for general torque tests, fatigue and angle fatigue tests.

Motorize Torque Tester

Screw Puncture Tester

Function:

> This tester provides a constant load and speed to test how long the screw would take to go through a steel plate.

PAPER TESTER

Carton Compression Tester

MIT Folding Endurance Tester

Function:

> MIT Folding Endurance Tester provides a specific load and in a angle of $\pm 135^\circ$ to fold the specimen.
> For testing the folding endurance for materials of circuit soft board, copper foil, paper etc.

ELECTRONIC MATERIAL TESTER

FPC Flexible Testing Machine

Function:

> FPC Flexible Testing Machine specialized in testing the using of life flexible circuit in its motion directions.

High Temperature Tensile (Compression) Tester

Function:

> This High Temperature Tensile (Compression) Tester with a extra extending space to be used with a oven, it can provides a high temperature testing environment.

Surface Hardness Abrasion Tester

Function:

> This machine allows user to test the abrasion endurance of baking lacquers, coating, electroplating and dyeing with sand bar, white cloth or steel wool.

Electric Plug/Cord Bending Tester

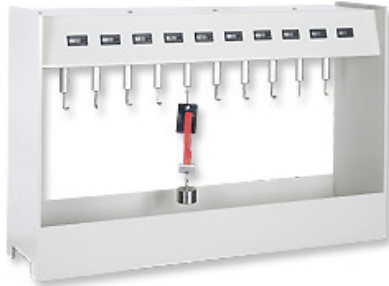

Function:

> This machine mainly aims at the bending endurance test of cables. When the cables break, the machine will record the bending times.

TAPE TESTER

Holding Power Tester

Function:

> This tester is aim to test the adhesive strength of tape under static load. Calculate the keeping time of tapes under a specified load, to know the adhesive strength and using life of tapes.

Tape Retentively Tester

Function:

> This tester is aim to test the adhesive strength of tape under static load. Calculate the keeping time of tapes under a specified load, to know the adhesive strength and using life of tapes.

Holding Power Chamber

Function:

> This device is used for test tape adhesive strength under high temperature and constant-temperature motionless static load condition.

Manual Roller

Motorize Roller

Function:

> It allows user to prepare the peel test specimen to make tape adhere to steel plate evenly.

Tape Initial Adhesion

PSTC Tape Initial Adhesion

UNIVERSAL TESTING MACHINE

Computer Server H/L
Temperature Tensile
Tester

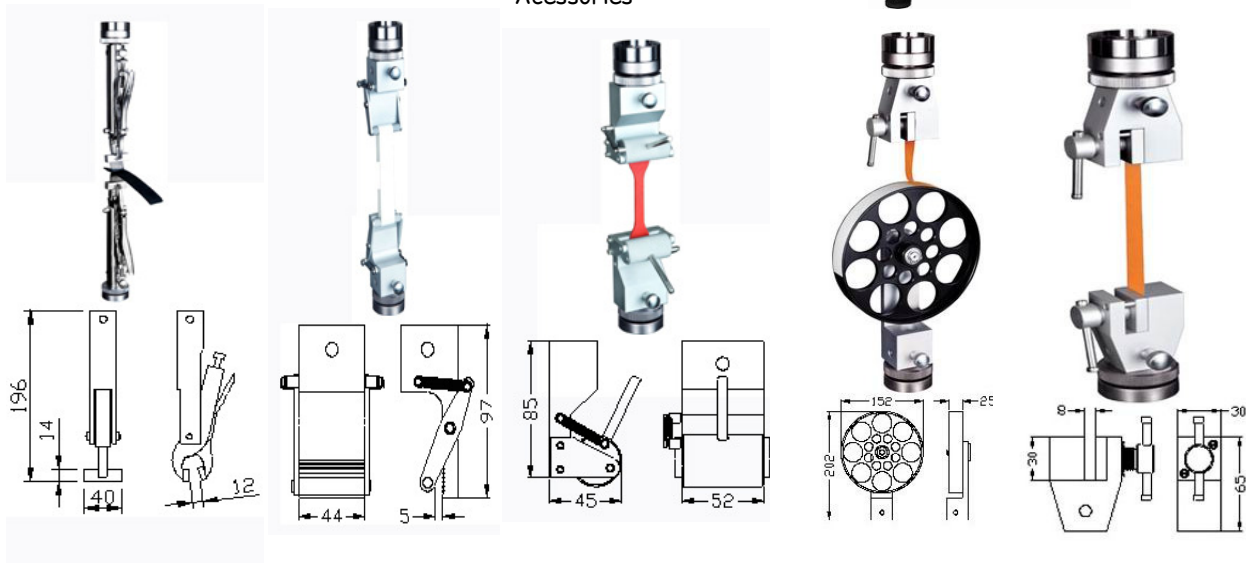

Horizontal Tensile Tester

Accessories

SPRING TESTER

Spring Twist test Machine

Function:

- > Spring twist test machine specialized in large test range, fast speed, and test angle operated by program.
- > To test the fatigue of torsion of spring is to design a unit fixture according to different type of spring, to set the fixture on testing place and to do the torsion test in different angles.

PACKING TESTER

Pneumatic Type Drop Tester

Function:

- > It only takes a small space to operate and is ideally suited for testing the impact of cartons, luggage cases, suitcases, electric equipment, etc.
